

# Smarter connectivity for the Public Sector

Fast, reliable network connectivity not only drives productivity and innovation, it physically underpins our economy. We work in partnership with central and local government bodies, and higher education establishments, to actively encourage and facilitate the deployment of high-speed, high-capacity full fibre network infrastructure to help our public services run more efficiently and cost-effectively.

We specialise in large-scale fibre network infrastructure, ideal for public sector organisations looking to enhance their connectivity capability and accomplish their digital goals.

## A high-bandwidth UK network

Choosing us as your network provider means access to:

**20,000+** KM

expanding fibre network across the country

**90+**

data centres

**350+**

Points of Presence

**100** Gbps

Wide range of connectivity solutions including Dark Fibre, Ethernet, Optical, Cloud Connect, Dedicated Internet Access and SD-WAN, with ultra-fast speeds of up to 100Gbps.

## High-speed growth ahead

Backed by SSE plc and leading infrastructure investor, Infracapital, SSE Enterprise Telecoms is investing heavily to help expand and develop network infrastructure across the UK.

We're willing to co-invest with our local authority customers in network assets, and utilise Physical Infrastructure Access (PIA), to make our cities and local communities better connected places.

## Making the complex simple

We'll make it simple for you to implement the network solutions you need, however complicated they are, because we know how to make technology change happen.

We have proven national network infrastructure capability including responsibility for mission-critical services.

“The relationship between Jisc and SSE Enterprise Telecoms originated in the early 2000s and, nearly 20 years later, the relationship continues to grow from strength-to-strength. A substantial level of trust has built up between our two companies.”

Jeremy Sharp  
Janet Infrastructure Director, Jisc

## Peace of mind

Safety, security and performance are paramount in our network operations and we have a strong service delivery reputation backed by class-leading average NPS scores.

55 +  
Average NPS score
